Professional summary

Product Designer and Operations Lead with a proven track record of optimizing asset management and internal workflows within high-growth tech startups. Combines deep operational expertise with a sophisticated background in UI/UX design to bridge the gap between complex business requirements and user-centric digital solutions. Expert in Figma, high-fidelity prototyping, and interactive design, with a unique ability to streamline organizational systems while advocating for intuitive, aesthetically driven product experiences.

Employment history

Freelance | Product Designer | New York City

Jan 2025 – Present

- Led rapid user-research sprints using moderated interviews to prioritize three high-impact features.
- Designed responsive Figma layouts that reduced development rework by clarifying component behavior.
- Ran remote usability tests with prototypes to uncover navigation blockers and guided fixes.
- Built interactive prototypes in Figma for stakeholder demos that accelerated approval cycles.
- Performed competitive analysis to identify feature gaps and recommended roadmap adjustments.
- Led heuristic reviews across core flows and recommended fixes that simplified onboarding steps.
- Drafted landing-page prototypes that clarified value propositions and informed marketing copy.

allwhere | Asset Management Lead | New York City

Jun 2025 – Present

- Optimized computerized inventory and order tracking systems to improve accuracy and processing speed with data-driven controls.
- Built Claude-based user interfaces to streamline user flows and increase workflow efficiency across teams.
- Led a team of three peers to deliver asset management projects and meet operational targets on schedule.
- Managed company partnerships by analyzing performance metrics to align strategies and increase partner value.
- Produced and analyzed reports to support decision-making, ensuring data accuracy and timely insights.
- Maintained organized records and applied data management best practices to ensure accessibility and compliance.
- Established process improvements and automations across internal teams to reduce manual work and speed operations.

allwhere | Asset Management Specialist | New York City

Dec 2022 – Jun 2025

- Processed shipment data with validation controls to maintain data integrity and timely updates.
- Coordinated delivery and pickup schedules to reduce logistics delays and improve routing efficiency.
- Maintained organized records using data management practices to ensure accessibility and regulatory compliance.
- Provided administrative support to warehouse teams to streamline operations and boost team productivity.
